SUMMARY

AI Engineer with hands-on experience building production ML pipelines, LLM-powered agentic systems, and end-to-end AI applications. Deployed a cash-flow forecasting system serving 3,000+ customers at Mindsprint (Olam Agri). Expertise spans LLM orchestration (Groq, Gemini, NVIDIA NIM), RAG, agentic workflows, and scalable ML model deployment. Strong ML foundations with XGBoost, ensemble methods, and feature engineering on large datasets. Proven ability to ship AI products with React/Node.js frontends and Python backends.

EXPERIENCE

Mindsprint (Olam Agri)

Data Analytics & AI Intern

Jan 2026 – Present

Chennai

Cash Forecasting Platform

Python, XGBoost, Random Forest, Snowflake, Streamlit

- Built a cash-flow forecasting system using XGBoost and Random Forest on 100,000+ payment records, achieving ~75% prediction accuracy across 3,000+ customers by engineering features like weighted averages, exponential moving averages, and historical transaction patterns.
- Developed an interactive Snowflake Streamlit dashboard to monitor forecasts, actual receipts, and cash-flow trends, enabling data-driven financial planning for business stakeholders.

Fast Document – AI Report Generator

Snowflake Streamlit, Cortex Agent, LLMs, Python

- Built a Snowflake Streamlit self-service analytics app allowing users to select databases, schemas, and tables with configurable filters, integrating Snowflake Cortex Agent to retrieve and analyze data based on user-defined requirements.
- Orchestrated LLM processing to transform query results into structured business reports featuring KPI cards, interactive visualizations, data-driven insights, and recommended actions for informed decision-making.

PROJECTS

JobGenius AI | *Node.js, Puppeteer, React, Groq, NVIDIA NIM, Gemini, WebSocket, shadcn/ui*

- Built an autonomous multi-agent job application system using Node.js and Puppeteer-Extra to navigate multi-step forms, dynamic fields, and complex workflows across major job portals with a three-tier career page resolution strategy.
- Designed a confidence-gated LLM orchestration layer routing tasks across Groq Llama, NVIDIA NIM, and Gemini, with human-in-the-loop review and a React/shadcn dashboard with live WebSocket telemetry for real-time monitoring.

Vyaap – AI WhatsApp Invoice Generator | *Node.js, Redis, React, Gemini, PostgreSQL, Chrome Extension*

- Built a Manifest V3 Chrome Extension capturing WhatsApp Web messages and routing them through a Node.js backend with JWT authentication, Redis job queues, and PostgreSQL persistence for reliable order processing.
- Designed an AI extraction pipeline using Google Gemini to parse structured invoice data from informal Hinglish messages with confidence scoring; generated invoices via a React + Vite dashboard with jsPDF, digitizing WhatsApp-based orders for SMBs.

Telco Customer Churn Prediction | *Python, XGBoost, Scikit-learn, FastAPI, Docker, Streamlit*

- Engineered a soft-voting ensemble (Random Forest, Logistic Regression, XGBoost) with SMOTE oversampling on 7,000+ customer records; applied custom feature engineering (TenureGroup, ChargesPerMonth, HighRisk flag) and tuned classification threshold to 0.45 to maximize recall for at-risk customers.
- Deployed a FastAPI REST backend with a Streamlit UI on Render and Streamlit Cloud; containerized the inference service with Docker, exposing a `/predict` endpoint returning churn probability, risk tier, and retention recommendations.

EDUCATION

M S Ramaiah University of Applied Sciences

B.Tech in AI & Machine Learning (AIML Specialization) — GPA: 9.2/10

Nov 2022 – Present

Bengaluru, India

- Relevant Coursework: Machine Learning, Deep Learning, Natural Language Processing, Data Structures & Algorithms, Operating Systems, Database Management Systems, Computer Networks

TECHNICAL SKILLS

AI / ML: LLM Orchestration (Groq, Gemini, NVIDIA NIM), LangChain, RAG, Agentic Workflows, XGBoost, Scikit-learn, PyTorch, TensorFlow, SMOTE, Ensemble Methods, Computer Vision, Pandas, NumPy

Languages: Python, JavaScript/TypeScript, C++, SQL, Java

Backend & APIs: Node.js, Express.js, FastAPI, REST APIs, JWT, Redis, PostgreSQL, MongoDB, WebSocket

Frontend: React.js, Vite, Tailwind CSS, shadcn/ui, Streamlit, HTML5/CSS3

Cloud & DevOps: Snowflake, Docker, GitHub Actions (CI/CD), Render, Streamlit Cloud, Git

Problem Solving: 235+ LeetCode problems in C++ — BFS, DFS, DP, Backtracking, Sliding Window
